Purchase Examination Plan and Fees

Included Services

The following services and fees will be included at every purchase or lease examination:

- **Stable Call**
- **Purchase Clinical Examination**
 - Comprehensive dental, dermatologic, gastrointestinal, ophthalmic, neurologic, and respiratory exams as well as a thorough lameness exam to include palpation, flexion tests, and under-saddle assessment. Throughout the examination, numerous photographs, and videos will be documented and then provided to the buyer.
- **Gait Analysis with Inertial Sensors**
 - The lameness locator detects and quantifies gait asymmetry using inertial sensors that are placed on the horse. This is performed during the under-saddle portion of the exam.

Additional Services

The services below will be performed at the prospective buyer's request or after consultation with the doctor during the examination. Please indicate any additional services you would like performed at the pre-purchase examination:

- **Sedation**
 - Sedation may be necessary to perform ancillary services such as radiographs, ultrasound exam or endoscopy. This is required for most horses, even if well-behaved, and cost can vary.
- **Imaging**
 - **Customized Radiograph Package**
 - Specific radiographs may be taken upon request and/or based on the findings during the initial examination. If radiographs accompany the horse, instead of or in addition to radiographs taken during the exam, there will be a consultation fee.
 - **Full Purchase Exam Radiograph Package**
 - A standard set of pre-purchase radiographs requires 36 views to include: front feet, naviculars, all four fetlocks, both hocks, both stifles, the neck, and the back. The horse's front shoes will be removed to obtain the best quality radiographs of the front feet.
